- b. Calculate the number of moles of product formed.
- c. Calculate the number of moles of excess reagent remaining after the reaction.
- 54. Heating an ore of antimony ( $Sb_2S_3$ ) in the presence of iron gives the element antimony and iron (II) sulfide.

$$Sb_2S_3(s) + 3 Fe(s) \rightarrow 2 Sb(s) + 3 FeS(s)$$

When 15.0g Sb<sub>2</sub>S<sub>3</sub> reacts with an excess of Fe, 9.84 g of Sb is produced. What is the percent yield of this reaction?

- 69. The manufacture of compound F requires five separate chemical reactions. The initial reactant, compound A, is converted to compound B, compound B is converted to compound C, and so on. The diagram below summarizes the steps in the manufacture of compound F, including the percent yield for each step. Provide the missing quantities or missing percent yields. Assume that the reactant and product in each step react in a one-to-one ratio.
